Welcome to “Whatever It Takes” Transmission Parts

We say **“Whatever It Takes”** is more than our name, it’s our commitment to you! This is why we have spent a lot of time and money in creating what we think is the most complete and the very best looking transmission pictures in our industry. We are proud to offer this catalog to our customers and to our industry. We are also committed to keeping our catalog updated with new transmissions as they come out each year. We hope that you will enjoy using this catalog as much as we have enjoyed developing it.

How To Use This Catalog

Table Of Contents:

Each transmission picture in this catalog is listed in the table of contents. First by the manufacturer, then by the transmission with the page number, description of the transmission and series number.

Pictures:

Most of our transmission pictures are two page layouts with arrows going back and forth, up and down and across pages. The arrows tell you in what direction and how the parts line up in order as they come out of the transmission.

Each picture has a square shaded box on the bottom of the page towards the center of the catalog with a two or three digit number in it. This number is the series number for that transmission. (Example: Allison 1000/2000/2400 has a **116** series number.) Each part has a three digit number with a line from the number to the part. This number is the part number for that part. (Example: Allison 1000/2000/2400 case has a number of **760** for the case.) So, for the Allison 1000/2000/2400 transmission case, the base part number is **116760**.

Part Numbering System:

The number system is the two or three digit series number with the three digit number pointing to the part. (Example: **116760** is the Allison 1000/2000/2400 case.) We also use prefix letters to tell us the manufacturer and suffix letters to tell the different variations of the part.

Input Sprag Rotation

No Reverse, No Drive Engagement, Bind in 2nd Gear

If you install the Input Sprag incorrectly or if the sprag has failed; the symptoms that will follow are no reverse, no drive engagement and a bind in 2nd gear. Check the transmission in all ranges, if you have Manual Low, look for the Sprag as the root of the problem.

Must-have kit for this transmission!
Corrects/Prevents/Reduces:
- Codes P0741, P0894, P1870

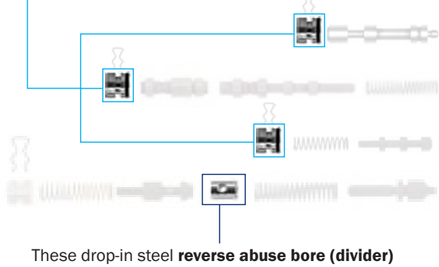
High mileage 4L60E?
Check these high mileage wear areas:

Valve body bore end plugs are commonly overlooked circuit leaks that result in driveability complaints such as; falls out of 4th, no 4th, TCC instability or surging (especially during cylinder deactivation)



These drop-in steel **reverse abuse bore (divider) plugs** are longer and slightly bigger than the OE plug virtually eliminating plug leak.

Actuator feed limit system
Wrong gear starts, bump on take-off, slow line pressure rise and unexplained clutch failure are symptoms of unstable oil pressure feed to shift, EPC, 3-2 and TCC PWM solenoids that can be traced back to excessive wear in the actuator feed system.

Allison LCT 1000, 2000 Series
Reprogramming Kit™ from TransGo®

TransGo® is in the final stages of testing on an all-new Performance Reprogramming Kit™ for 2011-2019 Allison Transmissions.

This new performance kit produces faster line rise, quicker clutch apply times and increased clutch and TCC holding capacity when throttle is added, without raising line to unsafe levels preventing unnecessary heat and wear. Innovative patent-pending pump and valve body components provide smart, on-demand pressure increases for quicker, firmer shifts with maximum clutch and TCC holding capacity in all applications— stock or tuned.

- Firm, crisp upshifts for added durability and performance in all applications
- Maintains factory shift feel at light to medium throttle with progressively firmer upshifts through WOT
- Engineered for work or performance trucks—stock or tuned

#A1000-501
Billet Output Shaft
Features:
- Precision ground for high dimensional accuracy
- Ideal for heavy duty service applications

#A1000-901
Billet Flex Plate
A must-have upgrade for any truck with the power turned up or for stock trucks pulling heavy loads. Factory plates often crack and eventually shear, causing complete loss of power to the transmission.

#A1000-500
Billet Input Shaft
Features:
- Precision ground for high dimensional accuracy
- Ideal for heavy duty service applications
- Machined with larger than O.E.M. radius at turbine spline for added strength
- Ideal for those who challenge their vehicles at work or at play

#A1000-934
Transmission Cooler Thermostatic Bypass Upgrade
Features:
- Increase in cooler flow due to the elimination of the orifice bottleneck located in the factory part
- Bypass allows cooler to immediately begin cooling the transmission

FULL ROUND STEEL BACKED BUSHINGS

Dura-Bond bimetal bushings are constructed of seamless steel tube with a thin layer of SAE 13 babbitt material. Seamless construction makes installation easy, eliminating breakage and bearing surface interruptions.

SAE 13 babbitt provides ideal properties for nearly all transmission applications. Babbitt's superior embedabilty, conformability, and anti-seizure chartacteristics have proven to reduce transmission failures which harder bushing materials can cause.

The seamless, 100% machined surface design provides the tightest tolerances in the industry. The centerless ground OD, centerless bore ID results in wall variations of .0005 in., giving the customer increased system design flexibility.

DURA-BOND ALSO OFFERS

Bronze Bushings – Long lifespans, resist shock, impact, wear and corrosion
Fluoropolymer Coated – For maximum fatigue life and improved surface properties
Dry Film Lubricant Coating – Provides solid lubrication of parts subject to torque or contact stresses
Bushings with Indents – Better oil retention
Semi-Finished Bushings – Allow you to machine bore for proper fit and center-line accuracy

Five Great Products That Fit The Whole 6L Family

NEW TransLab Engineered® 6L Series Pressure Regulator Boost Valve kit

PART# STL018

The TransLab Engineered® by Superior Transmission Parts, Inc. Part # STL018 6L series Pressure Regulator Boost Valve kit fits ALL variations of 6L45/6L50 & 6L80/6L90 units. This kit can be installed in conjunction with the STL012 pump upgrade kit or Any O.E. Main Pressure Regulator valve, as well as, ALL After-market P.R. valve repair kits, including oversized* internal P.R. Valve types. Real~Steel™ "NO~Ream"™ "Drop~in and GO!"™ "Upgrade your Build"... Make it "Superior"™ *(*will not fit an "oversized" boost valve bore)*

TransLab Engineered® 6L80 Pump Upgrade Kit

PART# STL012

NO~REAM™, Drop~in and GO!™ Seat-less design PR Valve: Fine-tuned Regulation, improved TC & lube, added support with reduced bore wear in new Pumps and restored functionality in castings that exhibit wear from the factory type valve design.

Corrected Line Pressure Limit Spring: Helps prevent part breakage from excess High line. During brown-out conditions, max line climbs 60-160 PSI above normal Max line. This "over-pressure" breaks 3-5-R drum and 1-2-3-4 piston.

TransLab Engineered® 6L80 VB Upgrade

The new TransLab Engineered® 6L80 VB Upgrade with Patent Pending Compensator Circuit upgrade RETRO-FITS & Upgrades all GEN1 & GEN2 valve bodies to better than GEN3 (2014-up specs). No need to purchase additional VB plates or castings.

Improves/corrects engagement & shift control: upgrades all VB's to 8 ball system with L/R clutch exhaust control, NO~STICK™ SELECT valves, recalibrated springs, and sealing end plugs, for our NO~YUMP™ 1-2 shift feel.

PART# STL-6L80E

Corrects & improves lockup control: NO~REAM™, Drop~in and GO!™ Lockup control line-up uses unworn portion of the bore makes VB usable without reaming; recalibrated for better lockup feel.

4L60E/65E/70E Lockup Control Valve Upgrade

PART# STL022

• FITS ALL 4L60/65/70E 1993-up • Replaces ALL standard .441" diameter lockup control valve line-ups • Upgrades ALL styles of ockup control valve • Accommodates ALL engine and system configurations: NON-PWM, PWM, & PWM with DOD {cylinder deactivation} • Converts TCC PWM to full-on apply (non-DOD units) to address 1870 code • Stick resistant design for more accurate and reliable operation with DOD or active PWM • Optional "active" PWM• Dual o-ring end plug • Works sweet in everything! Try one today!

NOTE: Does NOT replace OVERSIZED [.472" diameter / SERTA Reman valve bodies]

6L45/50 6L80/6L90 SuperTuff® End Play Shim Kit

PART# K0146

Restores "the correct way" to set up proper internal clearance with machined pumps. Precise end play conserves compensator & lube loss integrity from excess clearance or by adding washers on the back of the stator, which can partially cut off compensator oil and / or lube flow out of the stator. Adds axial support and improves sealing ring performance. Kit comes 3 sets of 2 size shims, saves you time and money. A Superior Critical... "MUST~USE" ™ product.

RFE PERFORMANCE ESSENTIALS

AVAILABLE AT WIT

MADE IN USA

High-Pressure Tuneless™ Performance Valve Body Reprogramming Kit™

- High pressure without side effects
- Perfect for hard-working, towing/hauling applications as well as moderately-tuned diesel and Hemi V8
- No external PCM transmission tuning or aftermarket electronic enhancements required
- Will not disrupt vehicle computer feedback system

Availability:
#T72165AHP **(1999-10 7-checkball valve body)**
#T72165BHP **(2011-18 5-checkball valve body)**

High performance without side effects
A re-engineered torque converter max pressure limit system prevents over-pressurization/ballooning in lockup without effecting TCC apply feel. Re-calibrated line pressure curve mirrors driver throttle position and torque demand, delivering shorter, cleaner shifts at all throttle openings without harsh or erratic shift feel and/or bind-ups. Patent-pending internally balanced calibrations provide progressive and seamless clutch-to-clutch apply pressure increases to 210 psi max, **a 30% increase** over the OEM 160 psi max.

Solenoid Switch Valve Kits
For 0.420" or 0.453" switch valves

#A92741LK	0.420 diameter w/tools
#A92741L	0.420 diameter no tools
#A92741LAK	0.453 diameter w/tools
#A92741LA	0.453 diameter no tools

A quick and easy one-step solution to eliminate trouble codes and frequent complaints.

Corrects, Prevents, Reduces:
- O/D clutch failure
- No lock-up
- Limp-in mode
- Codes P1775, P1776, P0841, P0846, P0871, P0876 and P0988
- TCC slip and/or TCC control stuck off or on
- L/R pressure switch rational or circuit error
- Kills engine at a stop

#T72140CU
Hot-forged 1045 steel fully CNC'd overdrive pressure plate
Allows the addition of extra capacity to the OD stack. Get an additional *25% increase in overdrive clutch capacity when combined with the Tuneless™ Reprogramming kit.

**Depending on transmission: For single sided friction setup the stack up yields a 15% increase in surface area and for double sided friction setup like in the 545RFE, the end result is a 25% increase in surface area.*

#T72741CK
TCC Accumulator Piston and Sleeve Kit
Drop-in fix for a worn TCC accumulator bore, also TCC max pressure limit system needed for turning line pressure up on an RFE. For stock or high performance applications.

Corrects, Prevents, Reduces:

CHRYSLER

When the Andrea Doria Sunk So Did the Only Prototype of the Chrysler Norseman.

If It Had Needed a Transmission Kit, We Would Have Had It.

The Chrysler Norseman was a four-seat fastback coupe built in 1956 as a concept car. It was lost when the SS Andrea Doria sank, and never went into production.

If it had been produced Precision International's crack Engineering Team would have thoroughly checked it out. And Precision would have been first to market with a transmission kit designed specifically for the Norseman.

It is also possible that one of the more than 4,200 kits Precision has available in our 80,000 sq. ft. factory might already have been the right kit for the Norseman. All have passed ours, and ISO 9001's, rigorous quality control testing.

Most are in stock, ready for delivery, right to your work bench. Top quality kits, dependable delivery expert technical support always available, that's Precision. It's probably why **Precision International has been named a GM Supplier of the Year for Five Consecutive Years.**

Chrysler had high hopes for its Norseman concept. We'll never know if it would have been a top seller. But we do know that today for any car you work on, to get the transmission kit you need, when you need it, call **Precision International at 1-800-872-6649 or visit our website at: TRANSMISSIONKITS.COM.**

Hercules Ring (Patent Pending) from WIT!

Part Number:
A36576CHDK

The Hercules Ring (Patent Pending) eliminates the thrust of the planet being directly placed on the snap ring and groove, which then keeps all of the load of the planet on the set screws that are installed to hold the Hercules Ring (Patent Pending) to the clutch hub.

The Hercules Ring (Patent Pending) helps to eliminate the drum flaring open.

Resistor Values

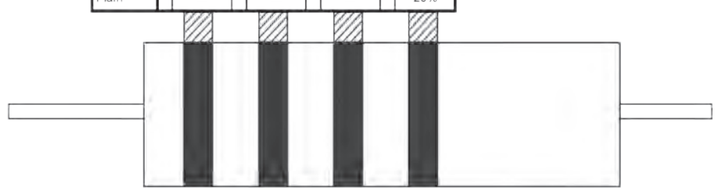
If you can read the bands on a ceramic resistor, you can determine its resistance value and its tolerance:

- The first two bands indicate the first two digits of its resistance value.
- The third band indicates the number of zeros to add.
- The fourth band indicates the tolerance.

Resistance Values

Color	1st Band	2nd Band	3rd Band	4th Band
Black	0	0	0	—
Brown	1	1	1	—
Red	2	2	2	—
Orange	3	3	3	—
Yellow	4	4	4	—
Green	5	5	5	—
Blue	6	6	6	—
Violet	7	7	7	—
Gray	8	8	8	—
White	9	9	—	—
Brown	—	—	—	1%
Gold	—	—	—	5%
Silver	—	—	—	10%
Plain	—	—	—	20%

Brown 1%



So if the bands are:					The resistor value is:
Blue 6	Green 5	Yellow 0,000	Silver ±10%	=	650 kΩ, ±10%
Red 2	Violet 7	Brown 0	Gold ±5%	=	270 Ω, ±5%
White 9	Orange 3	Violet 0,000,000	Plain ±20%	=	930 MΩ, ±20%

Correct Clutch Pack Cushions & Proper Installations

Another common source of after-rebuild failures has to do with clutch cushions. These cusions are easy to install incorrectly, or swap from one clutch pack to another.

These clutch cushions are specifically matched to the clutch pack they belong in. Any mistake in installation can cause a harsh apply, or can burn up a clutch pack, due to reduced clutch clearance.

Use the charts to identify the type of clutch cushion each clutch pack uses, and use the pictures to identify the proper way to install those cushions.
